

ABSTRACT

A wireless mouse structure with illumination has a wireless mouse body and an illumination system. The wireless mouse body has an upper case, a lower case and a switch. The illumination system is disposed in the mouse
5 body and has a plurality of light emitting devices and a battery. The battery is electrically connected to the plurality of light emitting devices, while the switch is electrically connected to both the plurality of light emitting devices and the battery. The illumination system is operable independently of an internal circuit of the mouse.
